### **DETAILED ACTION**

1. This office action is in response to a communication filed on 03/20/06. Claims 1-29 and 31-42 are pending. Claim 30 is cancelled.

#### ***Terminal Disclaimer***

2. The terminal disclaimer filed on 03/28/06 disclaiming the terminal portion of any patent granted on this application, which would extend beyond the expiration date of the full statutory term has been reviewed and is accepted. The terminal disclaimer has been recorded.

#### ***Allowable Subject Matter***

3. Claims 36-37, 40 and 42 are allowed.

#### ***Claim Rejections - 35 USC § 101***

4. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 1-29, 31-35, 38-39 and 41 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

Claim 1 recites “a method of segmenting input data representing an image in order to locate apart of said image...”. Claims 15, 20, 22-23, 26, 31 and 33 recite “a method for associating particular data in a space...”. Claim 34 recites “a system of segmenting input data representing an image in order to locate a part of said image...”. Claims 35 and 41 recite “a system for associating particular data in a space...”. In all of the above claims, applicant has recited steps that do nothing more than manipulate basic mathematical constructs, hence the claims are unpatentable. See *In re Warmerdam*, 33 F.3d 1354, 1360 (Fed. Cir 1994).

Art Unit: 2629

Patentable subject matter is held to exclude “laws of nature, natural phenomena, and the abstract ideas”. *Diamond V. Diehr*, 450 U.S. 175, 185, 101 S.Ct 1048, 1056 (1981). Applicant’s claims start with steps of manipulating abstract ideas and proceed to generate other abstract ideas. Only an applicant’s claims are entitled the protection of the patent system, therefore claims, if expressing ideas in a mathematical form, must describe something beyond the manipulation of ideas in order to qualify as patentable subject matter. In *re Warmerdam*, at 1360. Given the absence of any practical effect or significant independent physical acts, Applicant’s claim fail to adequately define the claimed invention within the domain of patentable subject matter.

Claims 2-14, 16-19, 21, 24-25, 27-29, 32, and 38-39 are similarly rejected as their respective independent claims. Each of these claims provides further refinements of the method, or the system, but none of the claims include any limitations that provide some practical effect of the method or system, which would avoid a rejection for lack of statutory subject matter.

Applicant may be able to overcome Examiner’s rejections by amending the claims to encompass statutory subject matter. If an applicant were to include language in the claims, which indicates some practical effect of the performance of the method or the operation of the apparatus, the examiner believes such an amendment would overcome the 101 rejection.
